EXAMINER'S COMMENT

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Torgardh, Klinger and Aldridge are being cited to show examples of the general mechanical state of the art.

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

With regard to claim 3, the prior art of record does not teach or suggest a quick connecting device for ducts in motor vehicles with a female member having first and second opposite ends, and an outer surface with first and second circumferential protrusions; a male member having first and second opposite ends, and an outer surface with a circumferential groove, the male member being receivable in the female member at the first end of the female member without the first end of the female member covering the circumferential groove; first and second sealing members disposed between the first and second circumferential protrusions, respectively, of the female member and the outer surface of the male member; and a fastening member disposed around the female and male members so as to be in direct contact with the first circumferential protrusion of the female member and received in the groove of the male member in a manner that compresses the first sealing member, the fastening member thereby holding the female and male members axially in place.

Art Unit: 3679

With regard to claim 7, the prior art of record does not teach or suggest a quick connecting device for ducts in motor vehicles with a female member having first and second opposite ends, and an outer surface with first and second circumferential protrusions; a male member having first and second opposite ends and an outer surface with a circumferential groove and an inclined surface, the male member being receivable in the female member at the first end of the female member with first and second sealing members respectively disposed between the first and second protrusions of the female member and the outer surface of the male member, and the male member being receivable in the female member at the first end of the female member without the first end of the female member covering the circumferential groove; the first sealing member being located on the inclined surface; and a fastening member disposed around the female and male members so as to be in contact with the first circumferential protrusion of the female member and received in the groove of the male member in a manner that compresses the first sealing member, the fastening member thereby holding the female and male members axially in place.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
